

Shivam Sahu

Senior Software Engineer

shivamsahu.ss27@gmail.com | 7015044673 | Gurugram, Haryana | linkedin.com/in/shivamsahu15

PROFESSIONAL SUMMARY

Senior Software Engineer specializing in enterprise cross-platform mobile development (Flutter, React Native). Expert in modern state management, scalable architectures (MVVM, Clean Architecture), and CI/CD automation to drive engineering velocity and app performance. Adept at complex API integrations, AI-assisted development tooling, and rigorous Test-Driven Development to consistently deliver reliable, maintainable code.

PROFESSIONAL EXPERIENCE

AiSensy, Senior Software Engineer

05/2026 – Present

Gurugram, India

- Driving mobile-first transition of a WhatsApp marketing SaaS platform, migrating core web features into a high-performance Flutter (Dart) application serving enterprise-scale business users.
- Architecting scalable state management using GetX with clean architecture and MVVM patterns; integrating WebSockets and REST APIs for real-time messaging and low-latency data synchronization.
- Implementing native platform integrations via Kotlin (Android) and Swift (iOS) through Platform Channels to support deep linking and push notifications (FCM).
- Leveraging AI-assisted development tooling (Claude Code) to accelerate feature delivery, maintain code quality standards, and reduce implementation cycle times.
- Collaborating on feature-parity initiatives ensuring a seamless, full-featured mobile user experience for users transitioning from web to Flutter-based mobile.

Decimal Technologies, Senior Software Engineer

07/2024 – 05/2026

Gurugram, Haryana

- Designed, maintained, and scaled a no-code Flutter platform serving 10+ enterprise clients, with emphasis on stability, performance optimization, and seamless cross-platform UX across Android and iOS.
- Led Flutter codebase upgrade to latest stable versions, eliminating 90% of deprecations and reducing crash rate by 30%, tracked and validated via Firebase Crashlytics.
- Architected and converted core platform features into a reusable SDK using Dependency Injection (GetIt) and the Repository pattern, enabling third-party integrations and driving adoption across 2+ major client migrations.
- Optimized configuration loading pipeline, reducing app startup time by 35%, measured with Flutter DevTools and Firebase Performance Monitoring.
- Built and maintained Jenkins CI/CD pipeline for automated iOS builds and internal distribution, extending release automation with Fastlane for App Store Connect and Play Console submissions to improve release cadence and team velocity.
- Diagnosed and resolved frame drops, memory leaks, and ANRs on iOS and Android using Flutter DevTools and native profiling instruments; applied null safety migration across the full codebase.

Unthinkable Solutions, Associate - Software Engineering

07/2020 – 07/2024

Gurugram, Haryana

- Delivered 7+ production cross-platform applications across Android, iOS, and Web using Flutter and React Native, converting pixel-perfect designs into clean, maintainable Dart, JavaScript, and TypeScript code with native integrations via Method Channels on both platforms.
- Implemented state management solutions Bloc, Provider, and Riverpod on Flutter, and Redux with React Navigation on React Native using MVVM and Repository pattern for scalable, testable architectures following Clean Architecture and SOLID principles.
- Integrated GraphQL and REST APIs for efficient data communication; implemented TDD with widget and integration testing (Mockito, Mocktail, golden tests, Jest), achieving 70%+ code coverage and reducing post-release bugs by 35%.
- Contributed to cross-platform performance optimizations including app size reduction, build configuration tuning, and rendering pipeline improvements.
- Collaborated with cross-functional product, design, and backend teams in Agile/Scrum environments, participating in code reviews to ship end-to-end customer-facing mobile features.

TECHNICAL SKILLS

- **Core:** Flutter, Dart, React Native, JavaScript (ES6+), TypeScript
- **State Management:** Bloc, Provider, Riverpod, GetX, Redux
- **Architecture & Practices:** Clean Architecture, MVVM, Repository Pattern, SOLID Principles, TDD, Dependency Injection (GetIt, injectable), Null Safety Migration, Method Channels / Platform Channels, SDK Development
- **Testing:** Widget & Integration Testing, Mockito, Mocktail, Golden Tests, Jest
- **Performance & Observability:** Flutter DevTools, Firebase Performance Monitoring, Crashlytics, Memory Leak Profiling
- **Security:** SSL Pinning, Code Obfuscation, Secure Storage (Keychain/Keystore), Biometric Authentication (local_auth), Root/Jailbreak Detection
- **Backend & APIs:** REST APIs, GraphQL, WebSockets, Firebase, Real-Time Data Sync
- **Native Integration:** Kotlin (Android), Swift (iOS), Platform Channels
- **App Features:** Deep Linking, Push Notifications (FCM), Offline-First Architecture (Hive, Isar, SQLite), Localization (i18n)
- **DevOps & Tooling:** Jenkins CI/CD, Fastlane, App Store Connect, Play Console, Git, GitHub, Android Studio, VS Code, Xcode, Jira, Figma
- **AI-Assisted Development:** Claude Code, Cursor
- **Process:** Agile/Scrum, Code Review

EDUCATION

Master of Computer Applications

Kurukshetra University, Haryana

2020 – 2022

Bachelor of Computer Applications

Seth Jai Parkash Mukand Lal Institute of Engineering and Technology, Haryana

2017 – 2020
